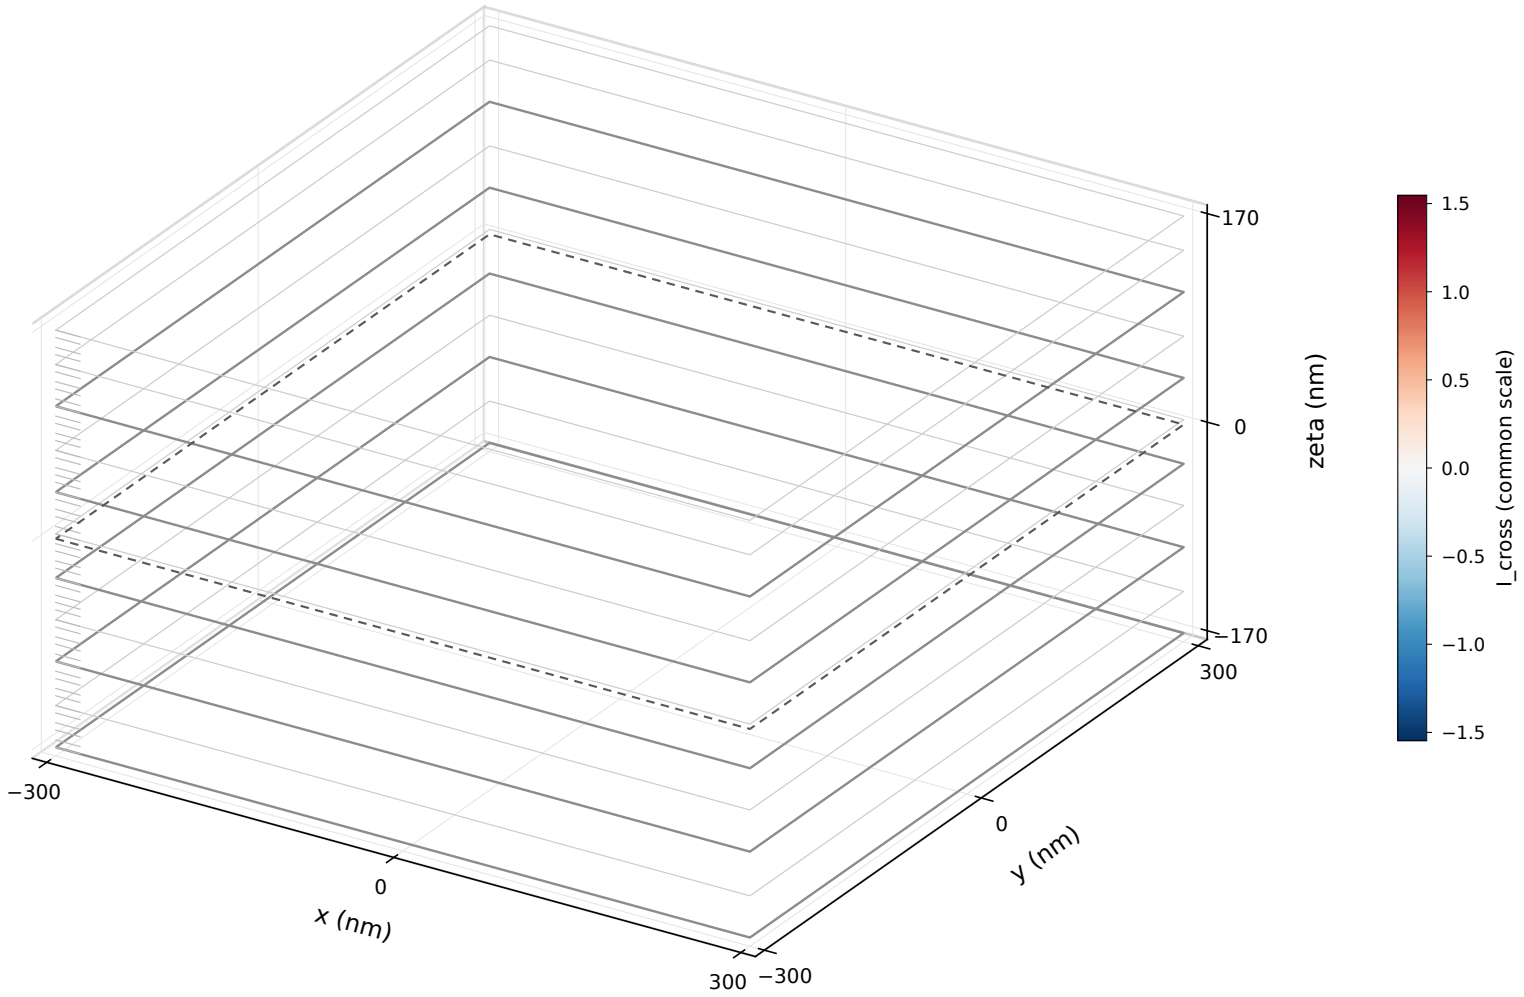
Fe_3O_4 D = 30 nm - 50-plane through-focus stack (common scale)

50 zeta planes, all 50 selected layers, common colour scale ±1.548 shared by the three diameters; true physical proportions



common scale reminder: max|I_{cross}| of D030 is 0.03255, i.e. ~48x smaller than D100, so this panel is deliberately almost blank; see the normalised version
