Fe_3O_4 D = 200 nm, centre height 100 nm - 50 selected zeta planes (-170 nm to +170 nm)

$I_{\mathrm{cross}} = 2\,\mathrm{Re}(E_{\mathrm{ref}}^{*} \cdot E_{\mathrm{scat}})$, signed, $I_{\mathrm{cross}} / \max|I_{\mathrm{cross}}|$ for this particle (per-particle normalisation, max = 1.045)
